

Programmable electronic ballast

ALSYVAR series

DOMZALE - SLOVENIA

DESCRIPTION

Luminous flux electronic regulator suitable to be used in public lighting. The Programmable electronic ballast is equipped with a microprocessor that automatically adjusts the lamp operation according to the environmental changing light depending on the seasons via an internal astronomical system.

It is mounted inside the streetlight door, away from heat sources, thus lengthening the module life .

Possibility to adapt the night lighting according to traffic by setting. Important energy savings achievable during the night off-peak up to 60%

On request it is possible to install in the closure the GSM module for the control and monitoring system remotely.

OPERATION

A unit placed at the beginning of the line commanded by a twilight probe enables at dusk and disables the lighting at dawn of a road, a parking lot, a square.

The system can be used in new or existing lighting systems where Sodium Vapor lamps are installed.

An hour before dawn at the start of urban traffic, the system will bring the lamp at full brightness in automatic mode and turn it off thanks to a twilight sensor.

OPERATING DIAGRAM

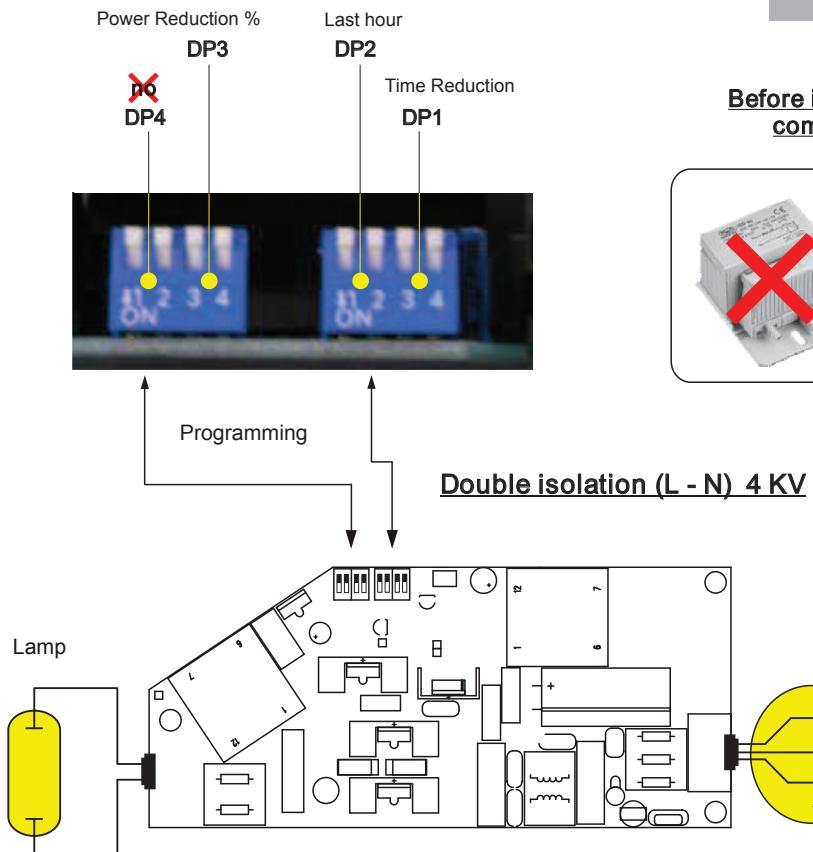

Programmable electronic ballast

ALSYVAR series

VITROLLES - FRANCE

PROGRAMMING

INSTALLATION

Before installing the module, remove the depicted components from the lamp compartment .

Vertical Mounting

TECHNICAL DATA

- Power supply from 190 VAC to 260 VAC/50Hz
- Reduced power consumption max = 60%
- Phase displacement power factor $\cos\phi = 0.99$
- Entering hours night reduction
- Last hour programming with the return to maximum power
- Reduced consumption = 0 - 20% - 40% - 60%

PRODUCT RANGE

Model	Power	Lamp
ALSYVAR-70	70W	HPS70
ALSYVAR-100	100W	HPS100
ALSYVAR-150	150W	HPS150

SYSTEM STRENGTHS

- 1 - Self-learning during the first night
- 2 - Extending the lamp's life + 40%.
- 3 - Immediate start with hot lamp.
- 4 - Reduction of maintenance costs.
- 5 - Power supply stabilized independent of the network.
- 6 - Remove ballast, starter, capacitor.
- 7 - Very easy to install
- 8 - Maintaining a constant power over time
- 9 - Thermostatically controlled system and self-protected
- 10 - Protection against transient network
- 11 - System with built-in astronomical clock

Every tampering of the module should happen in absence of tension, in the opposite case the company Rasotto declines any responsibility

Programmable electronic ballast

MINIVAR series

ROGNAC - FRANCE

DESCRIPTION

Electronic luminous flux regulator suitable to be used in public lighting.

The Programmable electronic ballast is equipped with a microprocessor that automatically adjusts the lamp according to the environmental changing light depending on the seasons by means of an internal astronomical system.

The module is mounted in the lamp ceiling , its thermostat measures the inner ambient temperature constantly and reduces the output power when reaching the threshold temperature, preserving the module integrity .

Possibility to adapt the night lighting according to traffic by setting.

Important energy savings achievable during the night off-peak up to 60%

On request it is possible to install in the closure the GSM module for the control and monitoring system remotely.

OPERATION

A unit (control panel) placed at the beginning of the line commanded by a twilight probe enables at dusk and disables the lighting at dawn of a road, a parking lot, a square.

The system can be used in new or existing lighting systems where Sodium Vapor lamps are installed.

An hour before dawn at the start of urban traffic, the system will bring the lamp at full brightness in automatic mode and turn it off thanks to a twilight sensor.

Programmable electronic ballast

OMNIVAR series

DOMZALE - SLOVENIA

Vertical
Mounting

DESCRIPTION

OMNIVAR is a universal dimmable electronic ballast (control gear) designed to be housed in the streetlight door, away from heat sources , on street lamps, instead of the traditional ferromagnetic system.

It works with gas discharge lamps of all kinds: high pressure sodium vapors , metal halide, Masters city, mercury vapors , obtaining, during the night operation and save up to 50% compared to the traditional system.

Using the side located Dip-Switch you can set the level of savings, the opening speech, the restoration of the maximum brightness to the resumption of traffic and the choice of the type of lamp

The power line is controlled by twilight or astronomical clock. The module is able to handle the change of seasons and the solar/daylight saving times.

For programming, follow the instructions through the documentation.

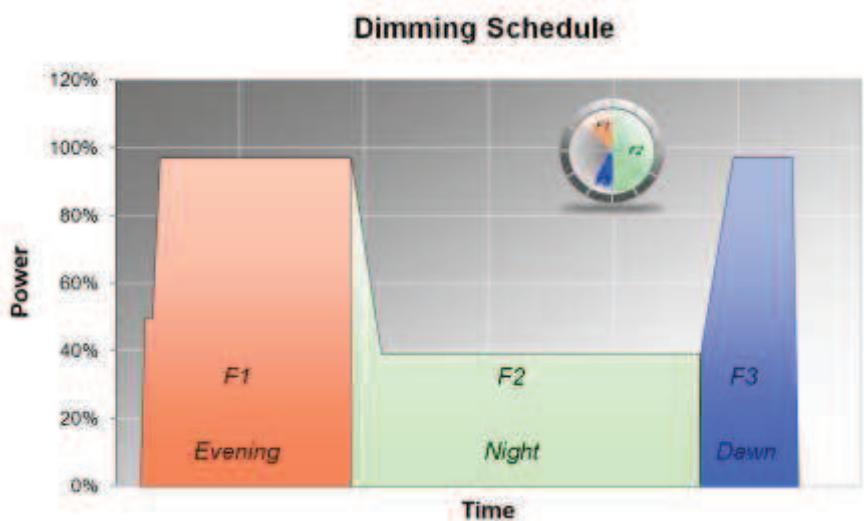

OPERATION

A unit (control panel) placed at the beginning of the line commanded by a twilight probe enables at dusk and disables the lighting at dawn of a road, a parking lot, a square.

The system can be used in new or existing lighting systems where Sodium Vapor lamps are installed.

An hour before dawn at the start of urban traffic, the system will bring the lamp at full brightness in automatic mode ant turn it off thanks to a twilight sensor.

HARMONIZED STANDARDS FOR CE MARKING

The below listed standards, as per the harmonized Italian version CEI, allow to apply the principle of "*Presumption of Conformity*" to the European directives, related to the minimum requirements of Electromagnetic Compatibility.

ELECTROMAGNETIC COMPATIBILITY

CEI EN 55015: 2008

Limits and measurement methods of Radio disturbance of electric lighting devices and similar equipments.

CEI EN 61547: 1996

General lighting equipments – Requirements of Immunity EMC

CEI EN 6100-3-2: 2007

Electromagnetic compatibility (EMC) – Part 3: Limits – Section 2: limits of harmonic current (devices with input current $\leq 16A$ / phase).

CEI EN 6100-3-3: 1997+A1: 2002+A2/ISI: 2006

Electromagnetic Compatibility (EMC) – Part 3: Limits – Section 3: limitation of voltage and flicker's fluctuations on systems with low tension power supply for equipments with rated current $< 16A$ and without conditional connection.

IQNet, the association of the world's first class certification bodies, is the largest provider of management System Certification in the world. IQNet is composed of more than 30 bodies and counts over 150 subsidiaries all over the globe.
